

## **SEWER EXTENSIONS AND HOOKUPS**

The Wausau Urban Area Sewer Service Plan indicates the following information needs to be provided when submitting sewer service extension requests:

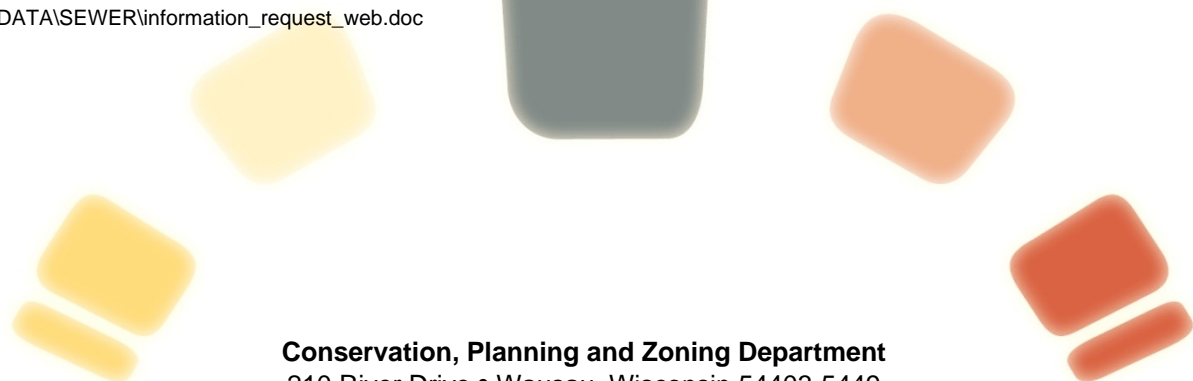

1. Agency proposing the sewer extension identifies in a letter to the Conservation, Planning and Zoning Department the project by name, location, owner or agent for owner (if any) and design engineer.
2. A detailed sewer extension plan map is also provided. This map indicates the location of the sewer service area, the termini of existing sanitary sewers and the exact route and size of the proposed sewer extensions. All environmentally sensitive areas within and near the proposed extension must also be shown on this map.
3. The project location should also be identified by Town, Range, and Section.
4. An estimate of the total number of acres of service area (excluding environmentally sensitive areas) that will be served by the extension.
5. The number of probable residential building lots likely to be served by the project.
6. General land use types to be served by the project should also be listed.

After the required information is submitted and the proposed extension is in conformance with the Wausau Urban Area Sewer Service Plan, the conformance letter will be issued.

Please feel free to contact me if you have any questions or concerns.
